

## The Arctura Kinetic Chronograph, in Titanium

**SNL007P**

Since the launch in 2003 of the new Arctura collection, it has become an outstanding success all over the world, and the Kinetic technology that is at the heart of all Arctura watches is winning over more and more consumers, thanks to its practical and ecological benefits. The Arctura Kinetic Chronograph caliber is the flagship of the collection. As the ultimate synthesis of Innovation & Refinement, it unites the very latest Kinetic technology with the modern, adventurous styling of Arctura.

For Spring 2004, Seiko adds a titanium version of the Kinetic Chronograph to the 11 existing styles in the Arctura collection. This new titanium style has distinctive red hands for the chronograph dials and a dark grey overall dial which harmonises with the matt and polished titanium case. Titanium is a perfect metal for a sports chronograph. It is 40% lighter than steel and, thanks to Seiko's special ion coating, the surface is scratch-resistant.

This new style is offered at an approximate recommended retail price of € 850.

### Technical Details
